#### Web server:

- 1) set IP address for PC & server
- 2) set the DNS server configuration in PCO  
config settings.
- 3) Enable DNS services in server → services
- 4) Web browser from PCO using the server IP  
address, assigned which shows the search  
for particular IP address

PC → Desktop → web browser ↓  
"Enter URL"

- 5) We can add & edit the server page by

server → services → DNS

- 6) Then we can browse from PCO using newly  
added Domain

- 7) By going: server → services → HTTP we can  
edit and add files.
